PROJECTS

Messenger | <https://github.com/crockevin/Messenger> | <https://messeger-8qqs.onrender.com/>

- This is was a group project where we made a real time messaging app, that users can add friends and send messages to each other
- My responsibility was all the backend code and all the front end queries and mutations
- Express js, graphql, MongoDB, React, web sockets,

Tech Blog | <https://github.com/crockevin/tech-blog> | <https://ucf-tech-blog-af225d7f8a74.herokuapp.com/>

- This is a blog website that users can create accounts, write and read blogs, and post comments on other user's blogs
- Express js, MySQL, Handlebars

Social Media API | <https://github.com/crockevin/social-network-api>

- This is a backend API that can be used on a basic social media website that can be updated later on, with this Users can make accounts, post their thoughts, and react to other users thoughts
- Express js, mongoDB

EXPERIENCE

Assisant store Manager

2016-2020

Camp La-No-Che

Apoka, FI

Assisted in opening and closing on scheduled times. Assisted other employees in their daily activities. Discussed with Manager about sales and product prices to see what needs to be changed, as well as what new products to stock and what to not stock.

Process Guide

2020-2023

Amazon

Deltona, FL

Assisted managers, and inform them of issues in the department. Helped operations run smoothly. Wrote reports at the start of shift and end of shift for quality and safety. Wrote reports of employees' quality issues and if they were resolved. Managed teams of 4-25 people.

Key Accomplishments:

- Written new guides to replace ones the site was already using because the ones they had were outdated, repetitive, or just made no sense if the employee did not already understand the process, and the result of it was that employees understood the processes better, and the guides were sent to other areas for them to use.

EDUCATION**Certificate in Full Stack Web Development:** UCF, Orlando, FL

Graduated Feb 2024

An 24 week intensive program focused on gaining skills in Full Stack Web Development. In this Program we were taught Html, Css, JavaScript, Node Js, Express, MySql, MongoDB , Handlebars, React, GraphQL, and MERN. Our coursework included: DOM manipulation, Object orient programming, Verification with Sessions, cookies and JWT, Using web API's and making your own RESTful API's along with GrpahQL, and combining it all with React for a MERN application.
